Caution should be taken when using a rotary cutter. Thinks of it as if one were handling a razor blade. They are sharp and dangerous.

Always cut away from yourself. Make sure when it is being used in a group situation that no one is directly across from the one using the blade.

Only open the cutter when making the cut. Always close the cutter after making the cut. Know where the cutter is in the work area.

Wear shoes when using a cutter

Rotary cutters are dangerous. People have cut their finger tips off, cut toes, and sliced others by not following these basic safety procedures.
